

ScopeGuard AI v2.6 — Master Blueprint / SSOT

0. Version Lock

Project name: ScopeGuard AI

Version: v2.6 — Lean Hackathon Demo Version

Subtitle: AI Revenue Shield for Freelancers & Small Agencies

Primary tagline: Stop working for free.

Full tagline: Stop working for free. Turn client requests into clear boundaries, fair quotes, and professional replies.

Product category: AI-assisted client communication and revenue protection tool

Primary users: Freelancers and small agencies

Core pain: Scope creep and unpaid client work

Core demo: Original project scope + client request → scope risk + evidence + clarifications + quote + professional replies

Viral hook: Private Vent Mode

Business hook: One avoided unpaid revision can pay for the product

Community hook: Drop your worst “just one small thing” client message

1. Final Product Positioning

ScopeGuard AI helps freelancers and small agencies compare new client requests against the original project scope, detect scope creep, identify missing clarifications, suggest fair change quotes, estimate timeline impact, and draft professional replies that protect revenue without damaging client relationships.

ScopeGuard AI is **not** a legal AI, contract lawyer, or legal advice tool. It is a **business communication and revenue protection assistant**.

One-liner

ScopeGuard AI helps freelancers stop working for free by turning messy client requests into clear scope decisions, fair change quotes, and professional replies in seconds.

10-second pitch

ScopeGuard AI helps freelancers stop working for free. Paste your scope and a client request, and it detects scope creep, suggests a fair quote, and writes a professional reply in seconds.

30-second pitch

ScopeGuard AI is an AI Revenue Shield for freelancers and small agencies.

Freelancers often lose money when clients ask for “just one more small thing” outside the original scope. Saying no is hard, and saying yes too often turns into unpaid work.

With ScopeGuard, users select their project scope, paste a client request, and the AI detects scope creep, highlights the exact evidence, identifies missing clarifications, suggests a fair change quote and timeline impact, and drafts a professional reply.

It is not legal advice. It is business communication support that helps freelancers protect their time, revenue, and client relationships.

At \$12/month, avoiding just one unpaid \$150 change request can create a 1,150% net ROI. ScopeGuard pays for itself the moment it helps you protect one boundary.

2. Problem Statement

Freelancers and small agencies do not only lose money because they lack clients. They lose money because clients repeatedly ask for “just one more small thing,” and those small extras quietly turn into unpaid work.

The recurring pain:

- Clients request work outside the original agreement.
- The request sounds small, so freelancers feel pressured to say yes.
- Freelancers hesitate to push back because they want to protect the relationship.
- Scope, pricing, and timeline are often discussed too late.
- Unpaid revisions reduce profit.
- Poorly worded replies can damage trust.
- Follow-up after change quotes is often awkward or forgotten.

Emotional framing

Every freelancer knows this message: “Can you just add one more small thing?” It sounds harmless, but repeated small extras quietly destroy project profit.

3. Target Users

Primary users

- Freelance developers
- Freelance designers
- Webflow / Framer builders
- Copywriters
- Video editors

- Branding freelancers
- Marketing freelancers
- Small software agencies
- Small design studios
- Indie makers doing client work

Secondary users

- Consultants
- Coaches
- Photographers
- Local service providers
- Small creative teams
- SMB service businesses with proposals, packages, scopes, or deliverables

HackOnVibe audience fit

HackOnVibe participants include vibe coders, indie makers, AI builders, developers, designers, product people, and first-time founders. Many of them either do client work, have done freelance work, or understand the pain of unclear project scope.

This makes the product easy to validate inside Discord using real or fictional client messages.

4. Why ScopeGuard Wins

ScopeGuard AI is optimized for hackathon scoring because it has:

1. Clear usefulness

It solves a real recurring problem: scope creep and unpaid client work.

2. Clear functionality

The flow is easy to understand: select scope, paste request, analyze, copy reply.

3. Meaningful AI implementation

AI compares scope against client request, extracts evidence, identifies missing clarifications, suggests quote/timeline, and writes replies.

4. Strong business potential

The product is tied directly to revenue protection.

5. Fast execution

MVP can be built as a single-page app with mock data and optional live AI API.

6. Strong presentation

The demo has emotional punch: “just one more small thing” → +\$320 change quote.

7. Community validation potential

Private Vent Mode gives people a fun reason to test and share.

5. Why Not Just ChatGPT?

This section must appear in pitch, submission, or Q&A.

Unlike a general-purpose chatbot, ScopeGuard is built around a freelancer-specific revenue protection workflow.

It remembers the project scope, maps every new client request against that specific agreement, highlights evidence, identifies missing clarifications, suggests a structured change quote and timeline impact, and generates one-click professional replies.

The user does not need to engineer prompts, explain the context repeatedly, or manually turn raw AI text into a business decision.

Three key differentiators

ScopeGuard	General chatbot
Saves and reuses project scope	User must re-explain context
Outputs structured scope analysis	Often outputs raw text
Optimized for change request workflow	General-purpose conversation
Shows evidence and clarifications	Usually needs extra prompting
Produces client-ready reply options	User must refine manually
Includes ROI and quote framing	Not workflow-native

6. Core Product Promise

ScopeGuard protects three things:

Protected asset	How ScopeGuard helps
Time	Detects extra work before it becomes unpaid work

Protected asset	How ScopeGuard helps
Revenue	Suggests fair change quotes and timeline impact
Relationship	Writes polite, professional replies that preserve trust

Core promise:

Protect your time, your scope, and your revenue in every client conversation.

7. Core User Flow

Lean hackathon flow

1. User selects an active project.
 2. App loads saved project scope.
 3. User pastes a new client request.
 4. User chooses reply tone.
 5. User enables or disables Private Vent Mode.
 6. User clicks **Analyze Request & Protect Revenue**.
 7. AI returns:
 8. Scope creep risk score
 9. AI confidence score
 10. Evidence highlights
 11. Missing clarifications
 12. Out-of-scope items
 13. Suggested change quote
 14. Timeline impact
 15. Private Vent roast
 16. Friendly upsell reply
 17. Firm pushback reply
 18. Follow-up reply
 19. ROI example
-

8. Final MVP Scope

Real must-have for demo

Only these are truly required:

1. Project dropdown + auto-filled scope.
2. Client request textarea.
3. Tone dropdown.
4. Private Vent toggle.
5. Analyze button.
6. Risk + confidence meter.
7. Evidence highlights + clarification chips.
8. Quote + replies + ROI card.

Nice-to-have

- Copy buttons
- Loading state
- Toast notification
- "Built for HackOnVibe" badge
- Discord share text
- LocalStorage for custom scope
- Live AI API integration
- Simple waitlist form

Cut from hackathon MVP

Do not build these unless everything else is done:

- Multi-page sidebar navigation
- Full authentication
- Full database
- Gmail integration
- WhatsApp integration
- CRM board
- Payment links
- PDF parser
- Full settings page
- Team workspace

Execution principle

Mock first, live API second. Demo must not depend on API stability.

9. Final Single-Page UI Structure

Page layout

One premium single-page dashboard optimized for a 90-second demo.

Header

- ScopeGuard AI logo
- Tagline: Stop working for free.
- Subtitle: AI Revenue Shield for Freelancers
- Badge: Built for HackOnVibe

Left column: Inputs

1. Project Context

2. Dropdown: Select Active Project

3. Mock options:

- TechNova Landing Page
- Cafe Logo Design
- SaaS MVP Build

4. Locked textarea: Original Scope of Work

5. Helper text: "Paste your original scope, proposal, contract, or simply describe what you agreed to deliver."

6. Client Request

7. Textarea: Paste Client Request

8. Placeholder: "Can you also add a payment page, rewrite the copy, and create 3 banners? Should be quick."

9. Analysis Settings

10. Reply tone dropdown:

- Friendly
- Firm
- Diplomatic
- Premium
- Short

11. Toggle: "Private Vent Mode — for laughs only, never sent to clients"

12. CTA button: "Analyze Request & Protect Revenue"

Right column: AI Output

1. Scope Creep Risk

2. 92% High Risk

3. 88% AI Confidence

4. Red progress bar or gauge

5. Summary: "This request adds 3 deliverables outside the original agreement."

6. Why this is out of scope

7. Evidence comparison list:

- Client requested: payment page → Original scope: payment integration excluded
- Client requested: copywriting → Original scope: copywriting excluded
- Client requested: banner assets → Original scope: not listed in deliverables

8. Clarifications needed before quoting

9. Chips:

- Payment provider?
- Banner dimensions?
- Copy length?

10. Private Vent

11. Visible only if toggle is on

12. Text: "This has classic 'just one small thing' energy — except the small thing is three new deliverables in a trench coat."

13. Note: "Do not send this to clients."

14. Suggested Change Quote

15. +\$320

16. Timeline impact: +2 days

17. Reason: "Extra page, copywriting, and banner design."

18. Smart Replies

19. Tabs:

- Friendly Upsell
- Firm Pushback
- Follow-up

20. Each tab has:

- Client-ready message
- Copy Reply button

21. **Instant ROI**

22. Text: "If ScopeGuard helps you avoid one unpaid \$150 revision at a \$12/month plan, your net ROI is 1,150%."

23. Equation: $(\$150 - \$12) / \$12 \times 100 = 1,150\%$

24. **Community CTA**

25. Text: "Got an awkward client message? Test it and share your result in Discord."

26. Button: "Copy Discord Share Text"

10. Feature Specification

10.1 Project Memory

Purpose:

- Reduces friction.
- Makes product feel useful for everyday client conversations.
- Avoids requiring the user to paste SOW repeatedly.

MVP implementation:

- Mock project dropdown.
- Auto-fill locked scope textarea.
- Optional localStorage for custom scope.

10.2 Scope Creep Risk Meter

Purpose:

- Gives immediate "WOW" output.

- Makes demo visually clear.

Fields:

- risk_score_percentage
- risk_level
- confidence_score_percentage

Example:

92% High Risk · 88% AI Confidence

10.3 Evidence Highlights

Purpose:

- Shows AI is doing semantic comparison, not just writing an email.
- Strong proof point for AI implementation.

Format:

Client requested	Original scope reference	Assessment
Payment page	Payment integration excluded	Out of scope
Copywriting	Copywriting excluded	Out of scope
Banner assets	Not listed in deliverables	Out of scope

10.4 Clarifications Needed

Purpose:

- Shows AI understands what is missing before quoting.
- Helps freelancer avoid underpricing.

Example chips:

- Payment provider?
- Banner dimensions?
- Copy length?

Demo line:

ScopeGuard also identifies what I need to ask before giving a final quote, so I do not underprice the change request.

10.5 Suggested Change Quote

Purpose:

- Turns out-of-scope request into a business opportunity.
- Strengthens revenue protection positioning.

Output:

- Amount
- Currency
- Label
- Reason

Example:

+\$320

Reason: Extra page, copywriting, and banner design.

10.6 Timeline Impact

Purpose:

- Shows scope creep affects schedule, not just price.

Example:

+2 days

10.7 Smart Replies

Tabs:

1. Friendly Upsell
2. Firm Pushback
3. Follow-up

Friendly Upsell example

Happy to help with those additions. They are outside the original landing page scope, mainly the payment page, copywriting, and banner assets.

I can add them as a change request for \$320 and extend delivery by 2 days. If you prefer to stay within the original budget, we can prioritize the original scope first.

Firm Pushback example

Thanks for the update. These additions are not included in the original scope, so I would not be able to include them within the current project budget.

We can either keep the original scope as planned, or I can prepare a separate change quote for the payment page, copywriting, and banner assets.

Follow-up example

Just checking in on the change request. I can either keep the project on the original scope and timeline, or add the extra items for \$320 with a 2-day timeline extension. Let me know which option works best.

10.8 Reply Tone Selector

Options:

- Friendly
- Firm
- Diplomatic
- Premium
- Short

Purpose:

- Makes output feel personalized.
- Lets user control communication style.

10.9 Private Vent Mode

Final UI name:

Private Vent Mode

Microcopy:

For laughs only. Never sent to clients.

Purpose:

- Viral Discord hook.
- Emotional release for freelancers.
- Makes B2B app memorable.

Rules:

- Roast the situation, not the person.

- No slurs.
- No protected traits.
- No identity-based insults.
- No profanity.
- Always label as private and not client-facing.

Example:

This has classic “just one small thing” energy — except the small thing is three new deliverables in a trench coat. Do not send this to clients.

10.10 Instant ROI Card

Purpose:

- Strong B2B business potential signal.

Text:

ScopeGuard is not just another productivity app. It is a revenue protection tool. For example, at \$12/month, avoiding one unpaid \$150 change request creates a 1,150% net ROI.

Equation:

$$(\$150 - \$12) / \$12 \times 100 = 1,150\%$$

Important:

Always say “for example”. Do not frame ROI as guaranteed.

11. Mock Project Data

Project 1: TechNova Landing Page

Project: TechNova Landing Page

Package price: \$700

Included:

- One landing page
- Up to 5 sections
- Responsive design
- Basic contact form
- 2 revision rounds

Excluded:

- Copywriting
- Payment integration
- Additional pages
- Custom illustrations
- Banner assets
- Advanced animations

Additional work: \$80/hour or fixed change quote after review.

Demo client request

Can you also add a payment page, rewrite the copy, and create 3 banner images? Should be quick, right?

Project 2: Cafe Logo Design

Project: Cafe Logo Design

Package price: \$450

Included:

- One primary logo
- One secondary logo
- Color palette
- 3 revision rounds
- Final files in PNG, SVG, and PDF

Excluded:

- Full brand guideline book
- Packaging design
- Social media templates
- Menu design
- Extra logo concepts after approval

Additional work: \$60/hour or fixed quote after review.

Demo client request

Can you also design the menu, 10 Instagram templates, and a packaging sticker? We already paid for the logo so I thought this was included.

Project 3: SaaS MVP Build

Project: SaaS MVP Build

Package price: \$2,500

Included:

- Authentication
- User dashboard
- Basic CRUD for one core workflow
- Stripe checkout
- Deployment to Vercel
- 2 revision rounds

Excluded:

- Mobile app
- Advanced analytics
- Admin panel
- Custom AI model training
- Third-party integrations beyond Stripe
- Ongoing maintenance

Additional work: \$100/hour or fixed change quote after review.

Demo client request

Can you also add an admin dashboard, mobile app version, analytics, and integrate HubSpot before launch? We need it by Friday.

12. UI Prompt for v0.dev / Bolt.new / Lovable

Use this final lean prompt:

Build a polished single-page React + Tailwind demo app for "ScopeGuard AI" – an AI Revenue Shield for Freelancers.

Core positioning:

"Stop working for free. Turn client requests into clear boundaries, fair quotes, and professional replies."

The app should focus on one complete workflow:

Select project scope → paste client request → analyze scope creep → show evidence → identify missing clarifications → suggest quote → generate

professional replies.

Do not build multiple pages. Keep it as one premium dashboard screen optimized for a 90-second hackathon demo.

Visual style:

Clean, premium, modern SaaS. White background, dark slate text, subtle borders, soft shadows. Use green for safe, amber for caution, red for high-risk scope creep. The app should feel professional, protective, and slightly witty.

Include:

1. Header

- ScopeGuard AI logo
- Tagline: "Stop working for free."
- Subtitle: "AI Revenue Shield for Freelancers"
- Badge: "Built for HackOnVibe"

2. Left input column

- Project dropdown labeled "Select Active Project"
- Mock options:
 - TechNova Landing Page
 - Cafe Logo Design
 - SaaS MVP Build
- Locked textarea labeled "Original Scope of Work"
- Helper text: "Paste your original scope, proposal, contract, or simply describe what you agreed to deliver."
- Client request textarea labeled "Paste Client Request"
- Placeholder: "Can you also add a payment page, rewrite the copy, and create 3 banners? Should be quick."
- Reply tone dropdown with options: Friendly, Firm, Diplomatic, Premium, Short
- Toggle: "Private Vent Mode – for laughs only, never sent to clients"
- Primary button: "Analyze Request & Protect Revenue"

3. Right output column

Create a filled demo state, not empty.

- Risk Meter card:
 - Show "92% High Risk · 88% AI Confidence"
 - Add red progress bar or circular gauge
 - Summary: "This request adds 3 deliverables outside the original agreement."
- Evidence Highlights card:
 - Title: "Why this is out of scope"
 - Comparison rows:
 - Client requested: payment page → Original scope: payment integration excluded
 - Client requested: copywriting → Original scope: copywriting excluded

Client requested: banner assets → Original scope: not listed in deliverables

- Clarifications Needed card:
 - Title: "Clarifications needed before quoting"
 - Chips:
 - Payment provider?
 - Banner dimensions?
 - Copy length?
- Private Vent card:
 - Visible when toggle is on
 - Text: "This has classic 'just one small thing' energy – except the small thing is three new deliverables in a trench coat."
 - Note: "Do not send this to clients."
- Suggested Change Quote card:
 - Show "+\$320"
 - Show "Timeline impact: +2 days"
 - Reason: "Extra page, copywriting, and banner design."
- Smart Replies card:
 - Use tabs:
 - Friendly Upsell
 - Firm Pushback
 - Follow-up
 - Each tab contains polished client-ready text and a "Copy Reply" button.
- Instant ROI card:
 - Text: "If ScopeGuard helps you avoid one unpaid \$150 revision at a \$12/month plan, your net ROI is 1,150%."
 - Equation: $(\$150 - \$12) / \$12 \times 100 = 1,150\%$
- Community CTA card:
 - Text: "Got an awkward client message? Test it and share your result in Discord."
 - Button: "Copy Discord Share Text"

Make it feel production-ready, clean, responsive, and optimized for a hackathon demo.

13. System Prompt v2.6 for AI Backend

Use this as the backend system prompt:

You are ScopeGuard AI, an expert business communication and revenue protection assistant for freelancers and small agencies.

Your job:

- Compare the original project scope against the new client request.
- Identify whether the request is in scope, partially in scope, or out of scope.
- Explain the evidence clearly.
- Identify missing clarifications needed before quoting.
- Suggest a fair change quote and timeline impact.
- Draft professional client replies.
- Optionally generate a private humorous vent, but never insult protected traits, identity, race, gender, religion, disability, nationality, or personal attributes.
- Do NOT provide legal advice.
- Do NOT claim legal certainty.
- Frame outputs as business communication support.
- If the original scope is informal or incomplete, infer cautiously and list missing clarifications instead of making strong claims.

Return ONLY a valid JSON object. No markdown. No code fences. No extra text.

Inputs:

Original Scope: {{original_scope}}

Client Request: {{client_request}}

Tone: {{tone}}

Private Vent Enabled: {{private_vent_enabled}}

JSON shape:

```
{
  "scope_status": "out_of_scope",
  "risk_level": "high",
  "risk_score_percentage": 92,
  "confidence_score_percentage": 88,
  "summary": "This request adds three deliverables outside the original agreement.",
  "evidence_highlights": [
    {
      "client_requested": "payment page",
      "original_scope_reference": "payment integration excluded",
      "assessment": "out_of_scope"
    }
  ],
  "out_of_scope_items": ["payment page", "copywriting", "banner assets"],
  "in_scope_items": [],
  "missing_clarifications": ["payment provider", "banner dimensions", "copy length"],
  "suggested_change_quote": {
```

```

    "amount": 320,
    "currency": "USD",
    "label": "+$320",
    "reason": "Extra page, copywriting, and banner design."
  },
  "timeline_impact": {
    "days": 2,
    "label": "+2 days"
  },
  "private_vent_roast": "This has classic 'just one small thing' energy – except the small thing is three new deliverables in a trench coat. Do not send this to clients.",
  "smart_replies": {
    "friendly_upsell": "Client-ready email here.",
    "firm_pushback": "Client-ready email here.",
    "follow_up": "Client-ready email here."
  },
  "disclaimer": "ScopeGuard helps with business communication and scope analysis. It does not provide legal advice."
}

```

14. API Implementation Notes

Recommended model choice

Use whichever API is fastest and most reliable for the builder.

Decision rule:

Situation	Choose
Claude API key ready	Claude
OpenAI key + JSON mode ready	OpenAI
Gemini setup fastest	Gemini
API uncertain	Mock JSON first, live API later

Recommended principle:

Mock first, live API second. Demo must not depend on API stability.

Frontend request body

```
{
  "original_scope": "Project scope text here",
  "client_request": "Client message here",
  "tone": "Friendly",
  "private_vent_enabled": true
}
```

Frontend response mapping

- `risk_score_percentage` → risk meter
- `risk_level` → risk color
- `confidence_score_percentage` → small text under risk
- `summary` → risk summary
- `evidence_highlights` → evidence card
- `missing_clarifications` → clarification chips
- `suggested_change_quote.label` → quote card
- `timeline_impact.label` → timeline card
- `private_vent_roast` → private vent card
- `smart_replies.friendly_upsell` → tab 1
- `smart_replies.firm_pushback` → tab 2
- `smart_replies.follow_up` → tab 3
- `disclaimer` → footer note

Error fallback

If API fails, use demo mode.

Fallback message:

AI analysis is temporarily using demo mode. This lets judges see the full product flow even if the API is rate-limited.

15. Example Mock JSON Output

```
{
  "scope_status": "out_of_scope",
  "risk_level": "high",
  "risk_score_percentage": 92,
  "confidence_score_percentage": 88,
}
```

```

    "summary": "This request adds three deliverables outside the original
agreement.",
    "evidence_highlights": [
      {
        "client_requested": "payment page",
        "original_scope_reference": "payment integration excluded",
        "assessment": "out_of_scope"
      },
      {
        "client_requested": "copywriting",
        "original_scope_reference": "copywriting excluded",
        "assessment": "out_of_scope"
      },
      {
        "client_requested": "banner assets",
        "original_scope_reference": "not listed in deliverables",
        "assessment": "out_of_scope"
      }
    ],
    "out_of_scope_items": ["payment page", "copywriting", "banner assets"],
    "in_scope_items": [],
    "missing_clarifications": ["payment provider", "banner dimensions", "copy
length"],
    "suggested_change_quote": {
      "amount": 320,
      "currency": "USD",
      "label": "+$320",
      "reason": "Extra page, copywriting, and banner design."
    },
    "timeline_impact": {
      "days": 2,
      "label": "+2 days"
    },

}
```

16. Discord Validation Strategy

Post this early

Post in the most relevant channel: `#showcase`, `#projects`, `#feedback`, `#buidl`, or `#general` if no better channel exists.

Hey vibe coders 🙌

I'm building ScopeGuard AI – a "Revenue Shield" for freelancers who are tired of client messages like: "Can you just add one more small thing?"

Drop a real or fictional awkward client request below, and I'll run it through ScopeGuard's Private Vent Mode + generate a professional reply that protects your scope and revenue.

Example:

Client: "Can you also add a payment page, rewrite the copy, and make 3 banners? Should be quick."

ScopeGuard result:

⚠️ 92% scope creep risk

💰 Suggested change quote: +\$320

📄 Reply: polite upsell, not awkward pushback

Send me your worst "just one small thing" message 📌

Response when someone replies

Ran it through ScopeGuard 📌

⚠️ Scope creep risk: 88%

💰 Suggested change quote: +\$240

📄 Best reply angle: Friendly upsell

Private Vent:

"This has 'tiny request, giant unpaid workload' energy."

Professional reply:

[Paste generated reply]

Would this help you handle client requests faster?

What to capture

- Number of replies
- Emoji reactions
- People saying they would use it
- Funny client request examples
- Screenshots of app output
- Comments from Discord
- Any waitlist signups

Use screenshots in DoraHacks submission if possible.

17. 90-Second Demo Video Script

0:00–0:12 — Pain

Every freelancer knows this message: "Can you just add one more small thing?" It sounds harmless, but repeated small extras quietly destroy project profit.

0:12–0:25 — Product intro

This is ScopeGuard AI, an AI Revenue Shield for freelancers. I select my active project, TechNova Landing Page, and ScopeGuard instantly loads the original scope.

0:25–0:38 — Client request

Now I paste a typical client request: they want a payment page, copywriting, and banner assets — all framed as "should be quick."

0:38–0:50 — Analyze

I choose a friendly tone, turn on Private Vent Mode for fun, and click Analyze Request & Protect Revenue.

0:50–1:05 — Private Vent

First, ScopeGuard gives me a private vent — not for clients, just for laughs. This makes the tool fun to share in the community.

1:05–1:20 — Evidence and clarifications

But the serious part is here: ScopeGuard highlights exactly why the request is out of scope. Payment integration was excluded, copywriting was excluded, and banner assets were never part of the deliverables. It also shows the missing details I need before quoting: payment provider, banner dimensions, and copy length.

1:20–1:35 — Quote and reply

Then it suggests a fair change quote of \$320, adds 2 days to the timeline, and drafts a professional upsell reply I can copy in one click.

1:35–1:45 — ROI

ScopeGuard is not just another productivity app. At \$12 per month, avoiding one unpaid \$150 change request creates a 1,150% net ROI.

1:45–1:50 — Closing

ScopeGuard helps freelancers stop working for free, protect client relationships, and turn messy requests into clear business decisions.

18. Pitch Opening

Freelancers do not only lose money because they lack clients. They lose money because clients ask for “one small extra thing” again and again, and saying no is hard.

ScopeGuard AI turns every client request into a clear decision: in scope, out of scope, quote extra, reply politely, and follow up.

19. Pitch Closing

ScopeGuard does not just write emails. It protects freelancer revenue at the exact moment where unpaid work usually begins.

Alternative:

One protected boundary can pay for ScopeGuard for the entire year.

20. DoraHacks Submission Copy

Product Description

ScopeGuard AI is an AI-assisted client communication and revenue protection tool for freelancers and small agencies.

It compares new client requests against the original project scope, detects potential scope creep, explains what changed, identifies missing clarifications, suggests a fair change quote and timeline impact, and drafts professional replies so freelancers can protect their time and revenue without damaging client relationships.

Problem

Freelancers and small agencies often lose money because clients ask for “just one more small thing” after the project scope has already been agreed. These small extras can quietly turn into hours of unpaid work.

Saying no is difficult, especially when freelancers want to keep the client relationship healthy. ScopeGuard AI helps them set boundaries clearly, professionally, and confidently.

Target Users

ScopeGuard AI is built for freelance developers, designers, copywriters, video editors, Webflow/Framer builders, consultants, small creative teams, and small agencies that work with client scopes, packages, proposals, or statements of work.

Core Functionality

Users select an active project, paste a new client request, choose a reply tone, and click Analyze.

ScopeGuard AI then returns:

- scope creep risk score;
- AI confidence score;
- evidence highlights comparing the request against the original scope;
- missing clarifications needed before quoting;
- out-of-scope explanation;
- suggested change quote;
- timeline impact;
- private vent message for fun;
- professional reply options;

- follow-up message;
- ROI estimate.

AI-Powered Features

ScopeGuard AI uses an LLM to perform semantic comparison between the original scope of work and the new client request. It identifies in-scope and out-of-scope items, extracts missing clarifications, estimates scope creep risk and confidence, suggests pricing and timeline changes, and generates tone-aware business replies.

The AI is not just generating generic emails. It explains why a request is out of scope, identifies what still needs to be clarified, and turns that analysis into a clear client communication workflow.

Why Not Just ChatGPT?

Unlike a general-purpose chatbot, ScopeGuard is built around a freelancer-specific revenue protection workflow.

It remembers the project scope, maps every new client request against that specific agreement, highlights evidence, identifies missing clarifications, suggests a structured change quote and timeline impact, and generates one-click professional replies.

The user does not need to engineer prompts, explain the context repeatedly, or manually turn raw AI text into a business decision.

User Flow

1. Select active project.
2. Review saved original scope.
3. Paste client request.
4. Choose reply tone.
5. Enable or disable Private Vent Mode.
6. Click Analyze Request & Protect Revenue.
7. Review scope risk, confidence, evidence, clarifications, quote, timeline impact, and reply options.
8. Copy the preferred client-ready response.

Business Model

ScopeGuard AI uses a freemium SaaS model.

Free:

- 5 analyses per month
- 1 saved project
- basic replies

Solo — \$12/month:

- unlimited analyses
- saved projects
- tone control
- Private Vent Mode
- copy-ready replies

Pro — \$29/month:

- change quote generator
- follow-up generator
- PDF export
- reply library
- multiple client projects

Agency — \$59/month:

- team workspace
- client history
- Gmail/Discord integration
- shared templates

Pricing ROI

ScopeGuard is a revenue protection tool. For example, at \$12/month, avoiding one unpaid \$150 change request creates a 1,150% net ROI:

$$(\$150 - \$12) / \$12 \times 100 = 1,150\%$$

One protected boundary can pay for the product for the entire year.

Go-To-Market Strategy

The first users are freelancers, indie makers, and small agencies in the HackOnVibe Discord community.

During the hackathon, we will invite builders to drop awkward client requests and run them through ScopeGuard's Private Vent Mode and professional reply generator.

After the hackathon, we will launch in:

- Indie Hackers
- r/freelance
- r/webdev
- Webflow and Framer communities
- X / #buildinpublic
- freelance Discord servers

- small agency communities

The acquisition hook is simple: “Drop your worst ‘just one small thing’ client message. ScopeGuard will turn it into a professional paid change request.”

What Was Built During Hackathon

During HackOnVibe, we built:

- polished single-page React/Tailwind demo app;
- project memory with saved scope examples;
- client request analyzer;
- AI-powered scope comparison;
- risk and confidence meter;
- evidence highlights;
- missing clarification chips;
- suggested change quote;
- timeline impact;
- Private Vent Mode;
- smart reply generator;
- ROI card;
- Discord validation CTA.

Roadmap

Next 2 weeks:

- Save custom projects
- Export change requests as PDF
- Add reply history
- Improve pricing recommendations

Next 1–2 months:

- Gmail integration
- Discord bot command
- Proposal/SOW upload
- Client-specific tone profiles
- Team workspace

Long-term:

- Slack integration
- CRM integrations
- Contract template library
- Change order approval links
- Payment links for approved change requests

21. Landing Page Copy

Hero

Stop working for free.

Subhero

ScopeGuard AI helps freelancers turn messy client requests into clear boundaries, fair change quotes, and professional replies.

Supporting copy

Paste your original project scope and a new client message. ScopeGuard detects scope creep, explains what changed, identifies missing clarifications, suggests a quote, and drafts a client-ready response in seconds.

CTA

Analyze a client request

Alternative CTA:

Protect my scope

Feature bullets

- Detect scope creep before it becomes unpaid work
- Compare new requests against the original scope
- Get evidence-based explanations
- Identify missing clarifications before quoting
- Generate fair change quotes and timeline impact
- Draft polite replies that protect the relationship
- Use Private Vent Mode to laugh before you reply professionally

22. Slide Outline

Slide 1 — Title

ScopeGuard AI
AI Revenue Shield for Freelancers
Stop working for free.

Slide 2 — Problem

Clients ask for “one small thing”.

Freelancers say yes.

Project profit disappears.

Slide 3 — Solution

ScopeGuard compares client requests with original scope, detects scope creep, identifies clarifications, suggests quote/timeline, and drafts a professional reply.

Slide 4 — Demo

Show:

- project memory;
- pasted client request;
- risk + confidence meter;
- evidence highlights;
- clarification chips;
- quote;
- reply.

Slide 5 — Why Not Just ChatGPT?

Unlike a general-purpose chatbot, ScopeGuard remembers the project scope, maps requests against the agreement, outputs structured evidence, quote, clarifications, timeline, and one-click replies.

Slide 6 — AI Implementation

- semantic scope comparison;
- out-of-scope detection;
- evidence extraction;
- missing clarification detection;
- risk and confidence scoring;
- quote/timeline suggestion;
- tone-aware reply generation.

Slide 7 — Business Model

Free

Solo \$12/month

Pro \$29/month

Agency \$59/month

ROI example: \$150 unpaid revision avoided → 1,150% net ROI.

Slide 8 — Go-To-Market

- HackOnVibe Discord validation;
- Indie Hackers;
- r/freelance;
- Webflow/Framer communities;
- “drop your worst client request” campaign.

Slide 9 — Roadmap

- Gmail/Discord integrations;
 - PDF SOW upload;
 - change order export;
 - payment links;
 - team workspace.
-

23. Final Execution Order

Step 1 — Discord validation first

Post Discord validation message immediately. This can generate community proof before the app is fully ready.

Step 2 — Build single-page UI

Use the lean UI prompt. Do not build full multi-page SaaS.

Step 3 — Add mock JSON output

Make Analyze button show complete output even before API is ready.

Step 4 — Add API if time allows

Use Claude, OpenAI, or Gemini depending on fastest working key.

Step 5 — Record Loom

Use the 90-second script. Mock output is acceptable if UI flow is polished.

Step 6 — Submit DoraHacks

Use submission copy from this SSOT. Add validation screenshots if available.

24. Time-Boxed Build Plan

First 15 minutes

- Post Discord validation message.
- Prepare demo input and mock project data.

Next 90–120 minutes

- Generate UI.
- Clean layout.
- Add mock projects.
- Add output cards.
- Add copy buttons.

Next 45–60 minutes

- Wire Analyze button to mock JSON.
- Optional: connect live API.

Next 20 minutes

- Record Loom demo.

Next 20 minutes

- Submit DoraHacks.

Remaining time

- Polish copy.
 - Add screenshots.
 - Reply to Discord comments.
 - Improve UI spacing and states.
-

25. Final Build Checklist

Demo-critical

- ☐ Header with ScopeGuard AI branding
- ☐ Tagline: Stop working for free.
- ☐ Project dropdown
- ☐ Auto-filled SOW
- ☐ Client request textarea
- ☐ Tone dropdown
- ☐ Private Vent toggle
- ☐ Analyze button
- ☐ Risk meter
- ☐ Confidence score
- ☐ Evidence highlights
- ☐ Clarification chips
- ☐ Suggested quote
- ☐ Timeline impact
- ☐ Smart reply tabs
- ☐ ROI card
- ☐ Copy buttons
- ☐ Disclaimer: not legal advice

Submission-critical

- ☐ Product description
 - ☐ Target users
 - ☐ Core functionality
 - ☐ AI-powered features
 - ☐ Why not just ChatGPT
 - ☐ Business model
 - ☐ Go-to-market
 - ☐ What was built during hackathon
 - ☐ Roadmap
 - ☐ Demo video link
 - ☐ App link
 - ☐ Community validation screenshot if possible
-

26. Things To Avoid

Do not say

- Legal AI
- AI lawyer

- Contract law certainty
- Guaranteed ROI
- No competitor exists
- This saves everyone thousands
- Fully automated client negotiation

Say instead

- Business communication assistant
- Revenue protection tool
- Scope analysis
- Change request support
- Professional reply drafting
- Example ROI
- Human-in-the-loop
- Not legal advice

Required disclaimer

ScopeGuard helps with business communication and scope analysis. It does not provide legal advice.

27. Final Locked Statement

ScopeGuard AI v2.6 is a lean, practical, hackathon-optimized AI product for freelancers and small agencies.

It solves a real pain, demos clearly, uses AI meaningfully, has a direct business model, can be validated in Discord, and is buildable as a polished single-page app within the hackathon deadline.

Final locked tagline:

Stop working for free. Turn client requests into clear boundaries, fair quotes, and professional replies.
